By Stanislaus von Moos

The American architect Louis Kahn is one of the great master builders of the twentieth century. With complex spatial compositions, an elemental formal vocabulary and a choreographic mastery of light, Kahn created buildings of powerful archaic beauty. Among his most important works are the Salk Institute in La Jolla, California (1959-65), the Kimbell Art Museum in Fort Worth, Texas (1966-72) and the National Assembly Building in Dhaka, Bangladesh (1962-83). "Louis Kahn: The Power of Architecture" is the first comprehensive publication on this architect in 20 years, and presents all of his important projects. Essays by prominent Kahn experts discuss the sources, contexts and influences of his work; among the authors are such renowned art and architectural historians as Stanislaus von Moos, William J. R. Curtis, Eeva-Liisa Pelkonen and Neil Levine. Topics discussed include Kahn's pioneering role in concrete construction; the visionary plans for his home city of Philadelphia; his years
